### **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular, in line 9 the "flow conduit" appears to be a double inclusion of the "flow conduit" in line 12.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-7,13-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Morane et al. (4,860,933).

The Morane et al. reference discloses a container (101) containing the foamable composition under pressure, the container having a valve stem (107) with an exit opening for the composition at its end remote from the container, and which can be moved by application of actuating force to the valve stem (107) to thereby release the composition, an actuator (8) mounted on said container (101) and by which a user can apply actuating force to the dispensing valve, the actuator comprising, a flow conduit

Art Unit: 3754

(114) defining an upstream to downstream flow path for the foamable composition, having a downstream dispensing opening (124) and mated at an upstream end with the valve stem (107), the flow conduit being wholly or partly displaceable upon the application of actuating force to the actuator to thereby bear upon the valve stem to actuate the valve stem, means (113) to communicate actuating force to the flow conduit, a closure (127,138) adjacent to the dispensing opening, wherein in the absence of actuating force the flow conduit (114) is biased into a closed relationship with the closure (127,138) to obstruct flow of composition through the dispensing opening (124), on the application of actuating force to the flow conduit (114) the flow conduit is wholly or partly displaced to actuate the valve stem (107) and the flow conduit is displaced out of its closed relationship with the closure (127,138) to allow flow of composition through the dispensing opening (124).

Re: Claim 18, a method of dispensing a foamable composition consisting of a dispenser applying actuating force thereto to thereby bear upon the valve stem (107) and open the valve stem (107) to thereby cause the foamable composition to be dispensed from the dispensing opening (124).

5. Claims 1-7,13-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Meshberg (3,361,301).

The Meshberg reference discloses a container (12) containing the foamable composition under pressure, the container having a valve stem (14) with an exit opening for the composition at its end remote from the container, and which can be moved by

Application/Control Number: 10/550,884

Art Unit: 3754

application of actuating force to the valve stem (14) to thereby release the composition, an actuator (10,16) mounted on said container (12) and by which a user can apply actuating force to the dispensing valve, the actuator comprising, a flow conduit (25) defining an upstream to downstream flow path for the foamable composition, having a downstream dispensing opening (24) and mated at an upstream end with the valve stem (14), the flow conduit being wholly or partly displaceable upon the application of actuating force to the actuator to thereby bear upon the valve stem to actuate the valve stem, means (30) to communicate actuating force to the flow conduit, a closure (29) adjacent to the dispensing opening, wherein in the absence of actuating force the flow conduit (25) is biased into a closed relationship with the closure (29) to obstruct flow of composition through the dispensing opening (24), on the application of actuating force to the flow conduit (25) the flow conduit is wholly or partly displaced to actuate the valve stem (14) and the flow conduit is displaced out of its closed relationship with the closure (29) to allow flow of composition through the dispensing opening (24).

#### Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Goncalves (5,971,226), Katsuda et al. (6,241,131), Tice (3,383,879), Frey (DE 3203870), Nye (5,083,681), Ostrowsky et al. (3,726,444). Haas (3,318,492) are other various types of actuator caps.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to STEPHANIE E. TYLER whose telephone number is (571)272-8059. The examiner can normally be reached on 8:00am-4:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Shaver can be reached on 571-272-4720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
